

1/3

Fig. 1

Analysis by Western blotting of proteins secreted by NSO cells transfected with pAB2GS.

25µl of culture supernatant or control tissue-culture medium was run on a 10% SDS-reducing polyacrylamide gel, blotted to nitrocellulose and probed with antisera recognising human immunoglobulin chains and then with ¹²⁵I-labelled protein A.

Lane 1: Purified B72.3 chimaeric antibody to show positions of heavy and light immunoglobulin chains.

Lanes 2-5: Culture supernatant from 4 different transfected clones.

Lane 6: Culture medium (negative control).
